

**General Programmatic Datamart - Table Design
(CS_ADHOC_PROGRAM_REPORT)**

The following outline describes the new programmatic datamart, designed to assist users with their programmatic reporting needs. The following table is generated on a weekly basis (Saturday night), and is organized as follows:

Local Office ID	One record will be created for each applicant in each program (excluding Job Match, Training Eligibility, and Title III) that the applicant has participated in (ie. has a current program status of “enrolled” or “terminated”) since 01/01/98 (ie. their program start date is AFTER 01/01/98), and for each Local Office that the applicant has received at least one service in during their enrollment in the program (based on program start date and end date - if available). Note: if an applicant has been enrolled into a program by a specific Local Office, but no services have been posted yet for the specified office, then a record will still show up in this table for the enrolling office.
Local Office SDA	This field will contain the SDA that the local office is located in.
Program ID	This field contains the Program ID
Applicant ID	This field contains the Applicant ID
Program Start Date	This field contains the most recent start date for the specified program (if multiple start dates exist due to multiple enrollment periods, a record will only be created for the most recent enrollment period).
Program End Date	This field contains the most recent end date for the specified program (if the applicant is currently enrolled in the program, then this field will remain null).
Enrolling Office	This field will contain a value of Y or N, depending on whether or not the specified Local Office was actually the office that enrolled the applicant into the specified program. If an applicant is enrolled by one office, and then receives services by two other offices, then a record will be created for the enrolling office with a value of Y, and records will be created for the other two offices with a value of N.
Eligible in SDA	This field will contain a value of Y, N, or null, depending on whether or not the applicant is actually eligible for the specified program in the SDA of the specified Local Office. For example, if a record is created at Local Office #1 (in the Boston SDA) for an applicant in the Title I Adult program (because the applicant received a service from Local Office #1), but the applicant had not actually been made eligible for the Title I Adult program in the Boston SDA, then this field will be populated with a value of “N”. If the applicant is eligible for the Title I Adult program in the Boston SDA, then this field will be populated with a value of “Y”. Finally, if the specified program has no corresponding funding source that requires eligibility, then this field will be left as null.
Unsubsidized Employment	This field will contain a value of Y if the applicant has received a General Service of Outcome Enhancement / Entered Unsubsidized Employment, with a service date on or after the Program Start Date. Otherwise, the field will remain null.

Advanced Training	This field will contain a value of Y if the applicant has received a General Service of Outcome Enhancement / Entered Advanced Training, with a service date on or after the Program Start Date. Otherwise, the field will remain null.
Post-Secondary Education	This field will contain a value of Y if the applicant has received a General Service of Outcome Enhancement / Entered Post-Secondary Education, with a service date on or after the Program Start Date. Otherwise, the field will remain null.
Military Service	This field will contain a value of Y if the applicant has received a General Service of Outcome Enhancement / Entered Military Service, with a service date on or after the Program Start Date. Otherwise, the field will remain null.
Qualified Apprenticeship	This field will contain a value of Y if the applicant has received a General Service of Outcome Enhancement / Entered Qualified Apprenticeship, with a service date on or after the Program Start Date. Otherwise, the field will remain null.
State Recognized Credential	This field will contain a value of Y if the applicant has received a General Service of Outcome Enhancement / Attained State Credential (any of the 5 types of State Credentials should be accepted), with a service date on or after the Program Start Date. Otherwise, the field will remain null.
HS Diploma or Equivalent	This field will contain a value of Y if the applicant has received a General Service of Outcome Enhancement / Attained HS Diploma or Attained GED / HS Equivalency, with a service date on or after the Program Start Date. Otherwise, the field will remain null.
Other Exit (Group 1)	This field will contain a value of Y if the applicant has received a General Service of Outcome Enhancement / Called Back – Recall, Met All Program Goals, Moved From Area, Other – Services Completed, Transfer, with a service date on or after the Program Start Date. Otherwise, the field will remain null.
Other Exit (Group 2)	This field will contain a value of Y if the applicant has received a General Service of Outcome Enhancement / Institutionalized, Health Medical, Deceased, Family Care, Lacks Transportation, Cannot Locate, Other – Services Not Completed, Substance Abuse or Dependence, with a service date on or after the Program Start Date. Otherwise, the field will remain null.
Entry Job History ID	This field will contain the applicant’s Job History ID for their job history record with a start date closest to (but not greater than) the Program Start Date.
Exit Job Service ID	This field will only be populated for applicants that have terminated from the specified program and will contain the applicant’s Job Service ID from their earliest job placement record either overlapping or after their program termination date.
